HOME THEATER

Acoustical Problem Solved

with Wallmate™ and Echo Eliminator®

To Acoustical Surfaces:

Hey this stuff is great! This was my second home theater I've built for myself. The first time I built and needed acoustics I decided I would build panels and mount them to the walls, and that did a pretty good job and looked great, but took a lot of time and labor.

My girlfriend still reminds me how much her hands hurt from days of stretching and stapling fabric. No problem with the Wallmate™ I did the whole project, almost 300 sq. ft. myself in one weekend and a few nights after work and didn't need a shop to work in either. *I would definitely recommend Wallmate™ to anyone building a home theater.*

Continued on next page...

These pictures show the Wallmate™ track as well as the Echo Eliminator® acoustical cotton core as they are being installed. The tension of the fabric is pulled in all directions and stands slightly off the cotton to hide any seams between the acoustical panels. Ideally, we try to supply the cotton core as close to the color of fabric as possible.
