A Cappella Singing Group Builds Practice/Recording Studio in Rental Space with RSIC-1 Clips™ and Echo Eliminator™ Panels

My name is Josh Baesler. I am a member and part owner of a Cappella singing group, Marcoux Corner. In January of 2008 we moved our center of operations from 'my house' into a new office/studio space. Ever since the group's inception, we had always recorded our own music, but up until then we had used a very makeshift set-up in the house basement. This move, would be our first opportunity to actually build and

“Very Pleased with the Results and Have Been Enjoying Our Space and Recording Great Music Ever Since!”

drastically modify a space to suit the group's recording and mixing needs. After doing some research on what our options were for completing this project, I approached **Acoustical Surfaces, Inc.** I was put in contact with sales rep. Ted Weidman, who was able to put together a package with what I needed to get the job done, and was within our 'independent musician budget'. Ted and the entire staff were able to answer all of my

questions and provide suitable acoustic solutions throughout the entire process. We were all very pleased with the results and have been enjoying our space and recording great music ever since!

Thanks again!
Sincerely, Josh Baesler
Marcoux Corner

*Josh Baesler's concern for this space was not only the acoustic inside of the practice room but also with the sounds from other spaces leaking into his studio while the group was recording. After some discussion about products, the group chose to install the **RSIC-1 Sound Isolation Clips** on the walls and ceiling to decouple the structure. The use of this clip system is very similar to building a "room within a room" to stop sound transmission because the clip stops the hard surface contact from the sheetrock to the structure.*

*After the room was built and the sheetrock was installed and painted there was not much money left for the project but the job was only half done. The sound quality in the room needed to be improved and reverberation needed to be controlled. Josh discovered some discounted product on www.discountsoundproofing.com and went with the 2" thick, white **Echo Eliminator Panels** as well as some **Bass/Corner Traps**. These were spaced through out the room and the sound quality has been drastically improved.*

If you have any questions about this installation, please feel free to contact Ted Weidman at 800.448.0121, or Ted@acousticalsurfaces.com
